VÕ ĐOÀN ANH PHI

Ho Chi Minh City, Viet Nam
voanhphi.dev@gmail.com | 0866463002 | Portfolio: voanhphi.vercel.app

Hi, I'm Phi, a software engineer based in Ho Chi Minh City with a strong focus on frontend development and end-to-end product delivery. Leveraging my experience with React, Next.js, React Native, and modern UI tools, I've built robust web and mobile applications across the fintech and real estate sectors. Having a full-stack background (NestJS, PostgreSQL), I thrive in collaborating with backend teams for seamless API integrations and translating business requirements into technical solutions.
Although I am completing my degree, I am fully available to work full-time during standard office hours. I am looking for an opportunity to leverage my robust frontend engineering skills and deep understanding of API integration to build high-performance, scalable user interfaces and deliver seamless player experiences.

QUALIFICATION AND SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, Python
- **Frontend Web:** HTML5, CSS3/SASS, Tailwind, Shadcn UI, React.js, Next.js, Responsive Web Development, Component-based Architecture
- **Mobile:** React Native, Expo / React Native CLI, i18n
- **State & Data:** Redux Toolkit, TanStack Query, React Hook Form, Yup, REST API integration
- **Backend:** Node.js, NestJS, Express.js, RESTful API Development, Authentication & Authorization, RBAC
- **Databases:** SQL, PostgreSQL, MySQL, MongoDB, Prisma
- **Tools & Platforms:** Git, Vite, Webpack, Chrome DevTools, Docker, Postman, Swagger, Vercel
- **Engineering Practices:** Clean Code, Code Review, Unit Testing, Agile/Scrum
- **AI Integration:** Claude, Cursor, LLM Integration, Prompt Design

PROFESSIONAL EXPERIENCE

Full-Stack Developer – Hoa Lan Cattleya

Aug 2026 – Present

- Developed and maintained full-stack features across internal management, social, and e-commerce systems using Next.js, React, NestJS, and PostgreSQL.
- Built end-to-end business workflows for daily reporting, approval processes, KPI management, scheduled jobs, and department-based access control.
- Built a library of reusable UI components (data tables, dynamic forms, modals) shared across 4 distinct modules, ensuring interface consistency and speeding up cross-team development.
- Investigated and resolved production data issues, including reward-point reconciliation and corrections for affected customer orders.
- Collaborated directly with users during UAT, translating business requirements into technical solutions and refining features before release.
- Leveraged AI tooling Claude to accelerate feature development by rou ghly 30%, rapidly generate boilerplate unit tests, and assist in routine code reviews.

Mobile Front-End Developer – Trieu An Mobile

Jun 2026 – Sep 2026

- Developed and maintained key React Native workflows across patient profiles, account settings, notification preferences, and appointment management, covering both UI implementation and application logic.
- Built the mobile data layer with TanStack Query, React Hook Form, and Yup, integrating REST APIs, handling validation and server state, and implementing optimistic updates with rollback for responsive user interactions.
- Designed and delivered a no-login appointment lookup flow end to end, from the React Native interface to a rate-limited Laravel API that restricted responses to non-sensitive patient and appointment data.
- Expanded the app's internationalization (i18n) support to enable multilingual experiences across existing user flows.
- Established testing standards by writing unit tests with Jest and React Native Testing Library for complex validation forms and custom business-logic hooks.

R&D and Full-Stack Developer – Hopper Solution & Education May 2025 – Sep 2025

- Built the React frontend for 4 core fintech modules (deposit, saving, budgeting, eKYC) and actively resolved pre-release bugs within a 3-engineer Agile team.
- Implemented strict Role-Based Access Control (RBAC) for 3 distinct user roles, seamlessly integrating protected frontend routes with backend authorization.
- Developed 25+ NestJS REST APIs backed by optimized PostgreSQL schemas to support fully auditable financial transactions.

Freelance Front-End Developer – NhaNgonSaiGon Jan 2025 – Apr 2025

Website: https://nhangonsaigon.com.vn

- Developed a responsive real estate interface with property search, multi-criteria filtering, and inquiry workflows, integrating 15+ REST APIs.
- Reduced layout shift (CLS) on media-heavy listing pages for a stable experience on mobile and desktop.

PROJECTS

Sona Space – Furniture Website

Tech Stack: HTML5, CSS3, TypeScript, RESTful API, React, Vite, SASS, MySQL, Node.js

GitHub: Sona-Space

A full-stack e-commerce platform for furniture and interior design, featuring product categorization, order management, admin dashboard, and an AI-powered chatbot. Built by a 4-person team — I owned the backend APIs and frontend architecture.

- Designed and built 20+ backend API endpoints (Node.js) for products, categories, orders, and user management.
- Architected scalable frontend using React with component-based design, serving 3 distinct user flows (browse, purchase, admin).

AI Chatbot & Product Recommendations

- Integrated Gemini API into the chatbot to answer product-related questions, compare furniture options, and provide recommendations based on user input.
- Designed prompts and processed AI-generated responses before displaying them to users.

TomatoHub – AI-Powered Relief Campaign

Tech Stack: Next.js, FastAPI, PostgreSQL, SQLAlchemy, Alembic, TailwindCSS, TypeScript.

GitHub: Tomato-Hub

A full-stack platform that enables organizations to launch and manage transparent relief campaigns. Supports donations, volunteer registration, QR-based check-in/out, and real-time transparency logs with role-based dashboards.

- Built REST APIs for 3 user roles (supporter, organization, admin) covering campaign lifecycle, donations, and volunteer workflows.
- Implemented QR-based check-in/out system for real-time volunteer tracking and transparency logging.
- Built rule-based beneficiary scoring system ranking candidates by urgency, vulnerability, and verification status.

AI Campaign Creation & Transparency Reporting

- Built an AI-assisted campaign creation feature that converts free-text descriptions into structured fields such as campaign type, beneficiaries, goals, required supplies, and volunteer capacity.
- Used campaign and volunteer activity data as context for generating transparency reports after each check-in cycle.

EDUCATION

Industrial University of Ho Chi Minh City – GPA: 3.4 / 4 Jan 2023 – Dec 2027

- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Computer Networking, Database Systems, Software Testing, Software Engineering Capstone.
- I'm currently able to work full-time during office hours while continuing my university studies in the evening.
