VO DOAN ANH PHI

Software Engineer

Ho Chi Minh City, Viet Nam

voanhphi.dev@gmail.com | 0866463002 | Portfolio: voanhphi.vercel.app

Software Engineer based in Ho Chi Minh City with hands-on experience in frontend development and full-stack application delivery. Experienced in building web and mobile applications using React, Next.js, and React Native, with practical exposure to fintech and real estate projects. My backend experience with NestJS and PostgreSQL enables me to work effectively with APIs, collaborate across teams, and translate business requirements into technical solutions. I focus on writing maintainable code, building user-friendly interfaces, and continuously improving my engineering skills.

QUALIFICATION AND SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), Python
- **Frontend:** React.js, Next.js, HTML5, CSS3/SCSS, Tailwind CSS, shadcn/ui, Redux Toolkit, TanStack Query
- **Backend:** Node.js, NestJS, Express.js, RESTful APIs
- **Databases & ORM:** PostgreSQL, MySQL, MongoDB, Prisma
- **Mobile Development:** React Native, Expo
- **DevOps & Deployment:** Git, Docker, Github, GitLab CI/CD, Jenkins, Vercel, Render
- **AI Integration:** Claude, Cursor, LLM Integration, Prompt Design

PROFESSIONAL EXPERIENCE

Full-Stack Developer – Hoa Lan Cattleya

Aug 2026 – Present

- Developed full-stack features across 5 interconnected web applications sharing a NestJS backend, covering database design, REST APIs, and frontend development.
- Built a company-wide Daily Reporting module, reviewed daily by department heads, with approvals, KPI tracking, cron-generated drafts, and department-based permissions. Implemented reliable notifications via Resend and a PostgreSQL-backed Outbox Pattern, with retries and duplicate prevention.
- Implemented monthly profit-sharing rules across REST APIs, background workers, and 4 client applications, coordinating deployment to preserve existing payout rules during the transition.
- Enhanced Admin and E-commerce workflows with warehouse-based order filtering, Vietnamese search normalization, reward-point history, and improvements to shared React UI components.
- Investigated reward-point mismatches across 83 production orders, correcting 55 under-credited cases while preventing duplicate reward credits.
- Fixed authorization vulnerabilities in reward-point and payment APIs through ownership validation and role-based access control (RBAC).

Tech Stack: Next.js, React, NestJS, Prisma, PostgreSQL, TanStack Query, Resend, Jest, GitLab

Freelance Mobile Front-End Developer – Trieu An Mobile

Jun 2026 – Sep 2026

- Built an end-to-end appointment lookup feature using React Native and Laravel, enforcing rate limiting (5 requests/minute), restricted API responses, and feature tests to protect patient data.
- Developed account settings with TanStack Query, React Hook Form, and Yup, implementing optimistic updates with rollback and multilingual support (Vietnamese, English, Khmer).
- Centralized payment eligibility logic across 4 appointment screens and improved registration forms through validation, input handling, and Vietnamese-aware sorting.

Tech Stack: React Native, TypeScript, TanStack Query, React Hook Form, Yup, Laravel

R&D and Full-Stack Developer – Hopper Solution & Education May 2025 – Nov 2025

- Analyzed and documented the eKYC verification workflow using BRD, SRS, use cases, and BPMN, covering ID card and face capture, admin approval, and restrictions on deposit account creation for unverified users.
- Designed a system-wide RBAC model with 3 core roles (User, Admin, Support), module-level permissions, and extensible role management.
- Created UI wireframes and database ERDs for deposits, savings, budgeting, and eKYC.
- Developed React frontend features across 4 fintech modules and built 25+ REST APIs using NestJS and PostgreSQL.
- Collaborated with R&D/BA, Frontend, and Backend teams in an Agile/Scrum environment to clarify requirements, coordinate development, and resolve functional issues before release.

Freelance Front-End Developer – NhaNgonSaiGon Jan 2025 – Apr 2025

Website: https://nhangonsaigon.com.vn

- Developed a responsive real estate interface with property search, multi-criteria filtering, and inquiry workflows, integrating 15+ REST APIs.
- Reduced layout shift (CLS) on media-heavy listing pages for a stable experience on mobile and desktop.

Tech Stack: HTML5, SCSS, Bootstrap, JavaScript, Node.js, Express.js

PROJECTS

Sona Space – Furniture Website

GitHub: Sona-Space

A full-stack e-commerce platform for furniture and interior design, featuring product categorization, order management, admin dashboard, and an AI-powered chatbot. Built by a 4-person team — I owned the backend APIs and frontend architecture.

- Prepared SRS, use cases, business workflows, and database ERDs for the furniture e-commerce platform.
- Built REST APIs and an admin dashboard using Express.js and MySQL for managing products, categories, rooms, orders, and furniture design requests. Developed React pages for product browsing, product details, shopping carts, user registration, and order tracking.
- Integrated MoMo, and COD into checkout workflows, handling payment responses and order status updates.

AI Chatbot & Product Recommendations

- Integrated Gemini API to answer product-related questions, compare furniture options, and provide recommendations based on user input.
- Designed prompts and processed AI-generated responses before displaying them to users.

Tech Stack: React, TypeScript, Node.js, Express.js, MySQL, Playwright, Postman, GitHub Actions

EDUCATION

Industrial University of Ho Chi Minh City – GPA: 3.4 / 4 Jan 2023 – Dec 2027

- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Computer Networking, Database Systems, Software Testing, Software Engineering Capstone.
